

# Palestinian Water Information System Seminar Spanish National Water Information System

Jauad EL KHARRAZ, EMWIS TU Ramallah – 23/10/2010

- Official space for water information promoted by the Spanish water authority ( Ministry of environment, and rural and marine affairs). Inaugurated in January 2008.
- Transparency policies in water related environmental information.
- A more efficient way to manage water information
- A tool to support Water Framework Directive implementation

- <u>Selected contents</u>: only representative, validated and relevant information published in the system
- Direct access to own (DGA) and external (CEDEX, IGME, IGN, etc.) data sources
- <u>Unified data model</u> compatible with the principles of the Water Framework Directive INSPIRE

- The Water Framework Directive Opportunity
  - EU Commission has developed new criteria for water data management and acquisition:
    - New standards on data management (metadata, GIS, etc.)
    - WISE Water Information System for Europe
  - WFD implies a new, more integrated, water management model and information systems need to reflect this new paradigm too

# Spanish WIS Concept

- Multiplicity of topics
  - Water description and water status: surface water, ground water, quantity, quality, rainfall.
  - Water uses and impacts: industrial, agriculture, urban
  - Water infrastructure
  - Water management: laws, institutions, investments, monitoring actions.

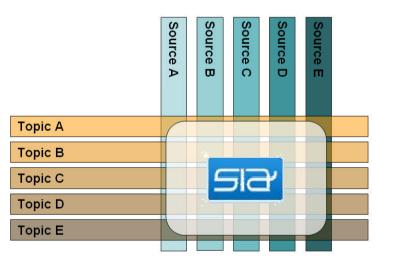

SEMIDE

ENVILLE

- Multiplicity of information types
  - Documents
  - Real time data
  - Validated data
  - Aggregated data / indicators
  - geographic information
- Multiplicity of focus levels
  - Local

**ADASA** 

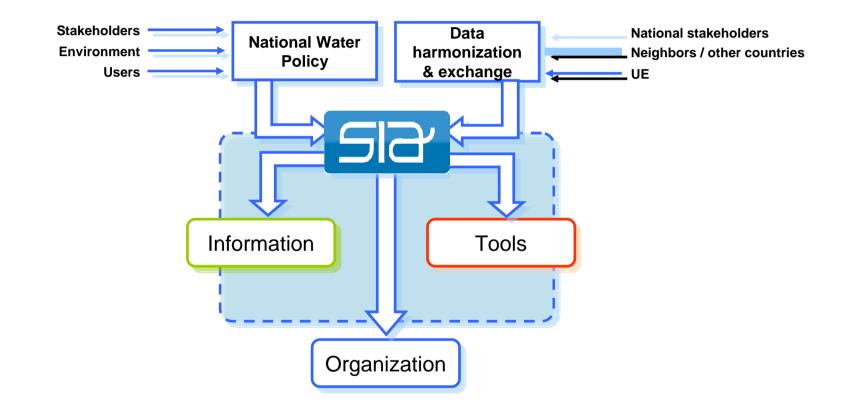

- National
- International / regional

# Spanish WIS Conceptual model

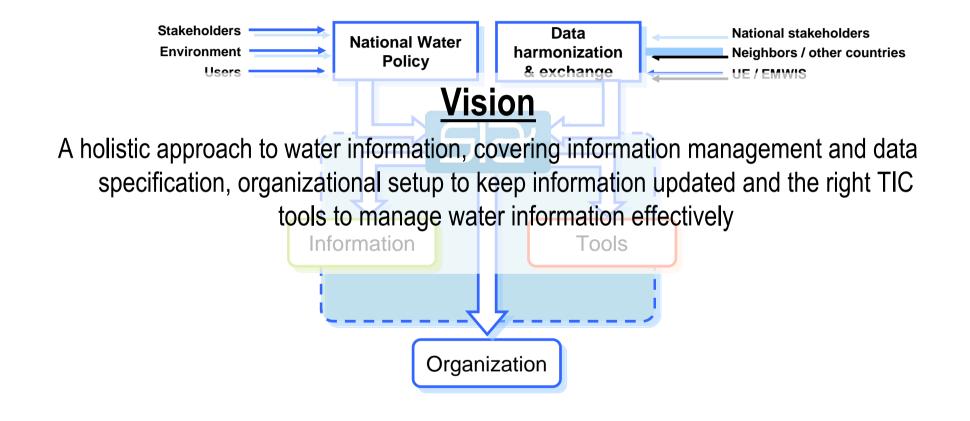

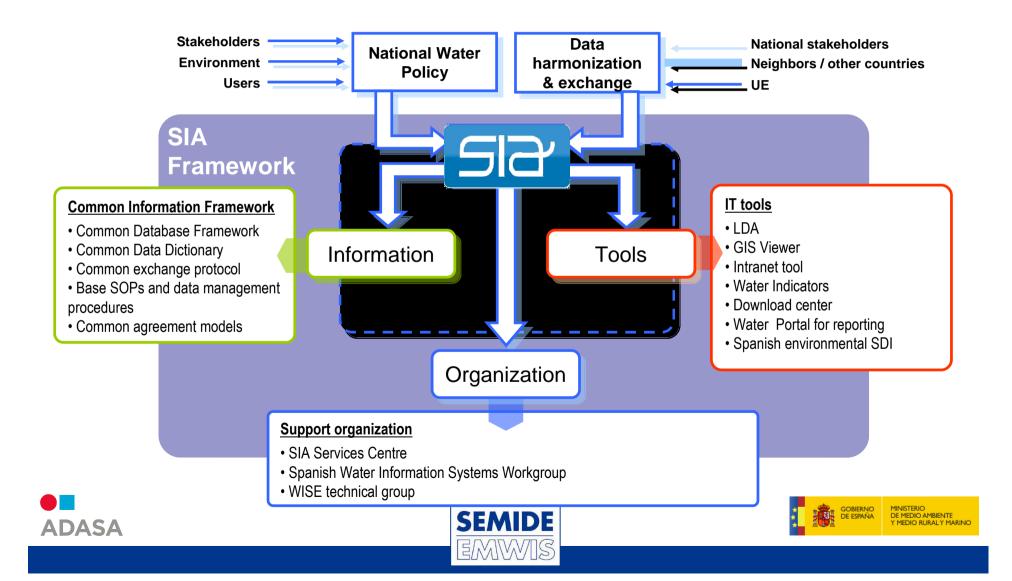

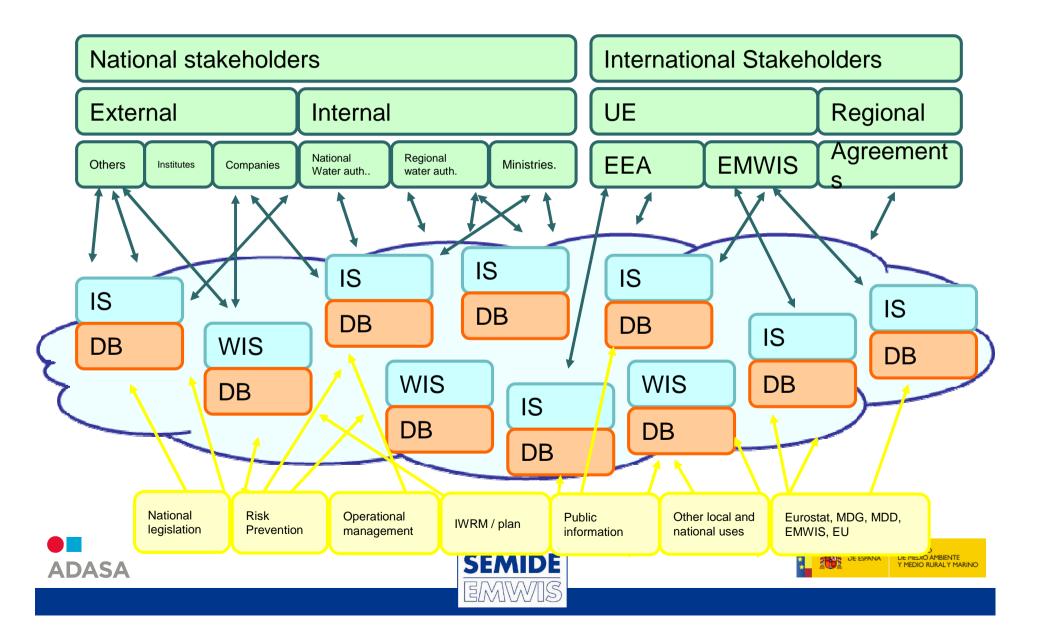

# **NWIS Framework**

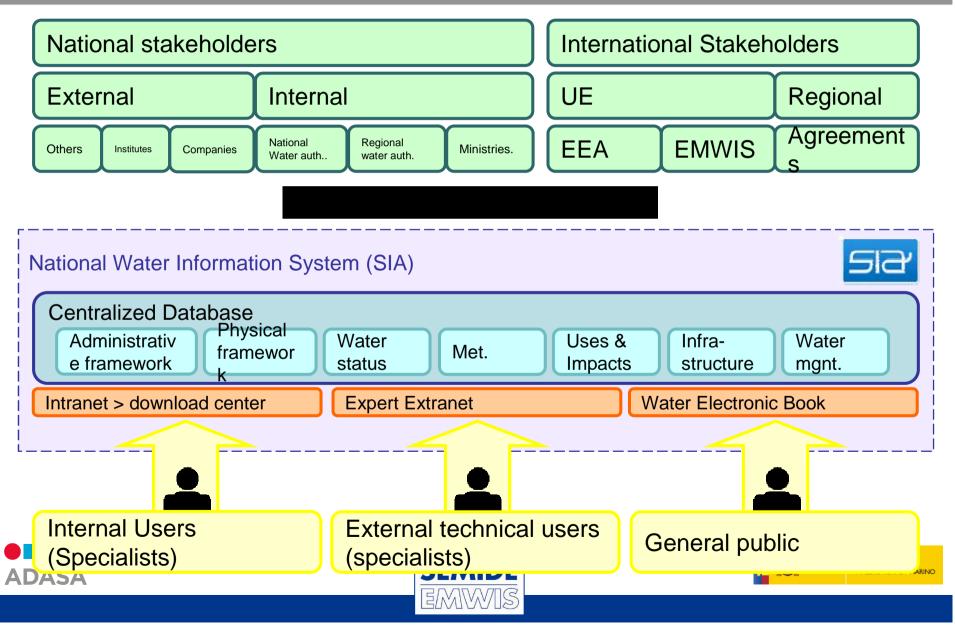

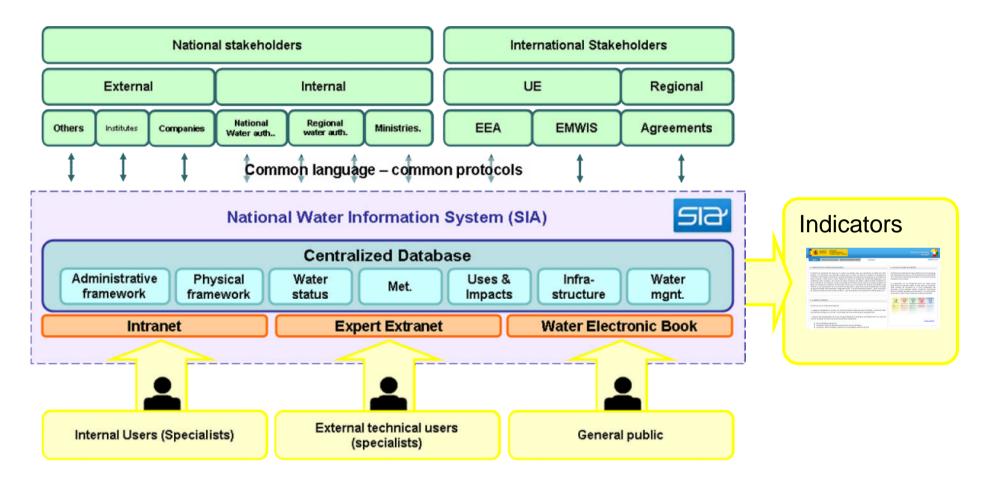

# **Functional Architecture (actual)**

### Water indicators

- GIS Viewer
  - Access to all the information available in the system
  - Could provide thematic views of all entities and data series available
  - Has been designed for
    - Advanced users (direct / rough access to data) > need to know what you are looking for
    - That understand water management issues and terminology
    - That need a high degree of flexibility to build their own queries

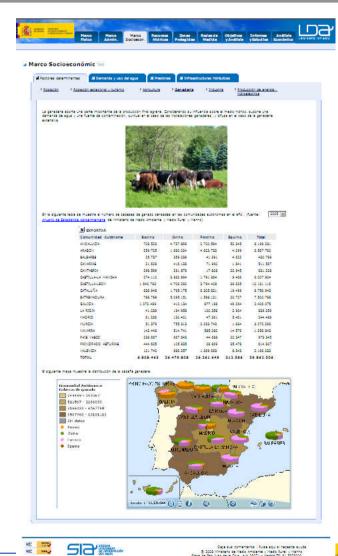

MINISTERIO DE MEDIO AMBIENTE

MEDIO RURALY MARINO

- Water Electronic Book
  - <u>Public participation tool</u> of the system, designed to popularize access to environmental water information
  - <u>Dynamic elements</u>, fed by the database, contextualized with static content explaining the relevance of the data.
  - <u>Fully interactive</u>: users can download life data, work with the map, export graphics, download documents, etc.
  - All dynamic content is up to date, renderized with the most <u>actual available information</u>.

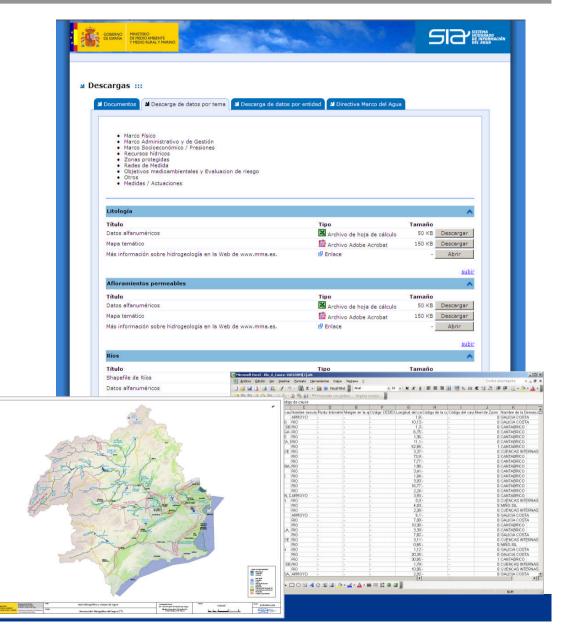

SEMID

- Data download center
  - Direct access to data download from the system
  - Static content:
    - Documents
    - Predefined maps
    - Reports
  - Dynamic content:
    - Shapefiles direct from the ArcSDE server
    - Excel files with life database information
    - Pdf maps dynamically generated from database information
    - Access to metadata

#### New Spanish Water Indicators

- Web site (portal) to access dynamically calculated water indicators
- Based on DPSIR model
- Combines a map overview with the trend of each indicator with a detailed view for each of them containing
  - Textual
  - Data
  - Graphics
  - Maps
- Linked with the other SIA tools to provide access to raw data used in indicator calculation
  - Viewer
  - Electronic book
  - Downloads

#### New Spanish Water Indicators

EL HIERRO

**ADASA** 

• Future migration of GIS viewer to higher reliability and easier use:

# SIA Elements - Organization

- Spanish Water Information Systems Workgroup
  - Created to discuss data exchange and interoperability issues with local and institutional partners in Spain.
  - Over 40 institutions represented
  - Specific CIRCA repository for information sharing
  - 6-monthly meetings
  - Three technical workgroups created to analyze specific topics
    - Data models: data modeling, metadata and codification
    - Information systems interoperability
    - Data exchange protocols and processes
- SIA Service center
  - Created to respond specific data requests that can't be addressed directly from available tools: LDA / Web GIS visor
  - Over 120 requests in 8 months, both from private and public institutions or citizens has been addressed.

#### • Users

	Phase 1 Jan to Jun 2008	Phase 2 Jun to Dec. 2008	Phase 3 Dec to end 2010
