PWA Water Information System

Prepared By:
Adel Yasin-
May 13, 2007

General Background Of PWA

The Palestinian Water Authority (PWA) is the official body which regulates and is responsible for overall water and Wastewater sectors in Palestine

PWA Needs for Water Information System

To ensure efficient management& Planning for water & wastewater sectors.

PWA

realized since established the need to establish a **Comprehensive Water Information System** that includes all available water related data

Main **purpose** of the **WIS**

To create a software environment which allows for the ease of recording, archiving & manipulating a wide variety of technical & scientific water – related information that are geographically spread and vary with time.

General Database Concepts

Databases

- By definition:
  - An organized or structured collection of data arranged to allow a set of activities to occur, and so it can be accessed and altered in an efficient manner

Purposes of a Database

- Reduce data redundancy and inconsistency
- Allow for easy access to the data
- Allow multiple users access to the same data
- Data security and integrity

Database Management Systems

- Database Management Systems (DBMS) are often confused with Databases
- For Example:
  - Microsoft Access is a DBMS. The database engine is a Microsoft Jet Database
  - The Borland Database Engine is used by Paradox and dBase

Database Management Systems

- Provide:
  - A way to define ‘containers’ to hold data (ie. tables)
  - Methods to search, sort, insert, modify, view, and delete data
  - A graphical user interface (GUI)
  - Enforce Referential Integrity Rules
  - Manage simultaneous data access among multiple users
  - Analyze relationships

Common DBMS

- Microsoft – Access, SQL Server, Visual FoxPro
- Oracle
- mySQL
- Paradox
- dBase

Relational Databases

- A collection of data indicating relationships among data elements
  - More simply, a collection of related data
- Data Elements:
  - Fields
  - Records
  - Tables

Normalizing a Database

- Normalization is the process of refining a database structure to improve its speed and data integrity.
- The main purpose is:
  - to limit redundant or duplicate data
  - to group related columns of data
- Normalization is a step by step procedure

PWA Databases

Database Design Objectives

- Provide a secure, central location for storing water related data
- Provide easy methods of importing, exporting and viewing this data
- Provide a method of linking data of different types, eg. water level data with stratigraphic information

Characteristics of the WIS at PWA

- Point related data
- Data: spatial and time series data
- Data Includes: WB and GS data
- Relational DBMS
- Outputs: graphs,reports, maps
- Data export to Excel
- Interface: Arabic and English
- Security: Different User levels
- Designed for GIS

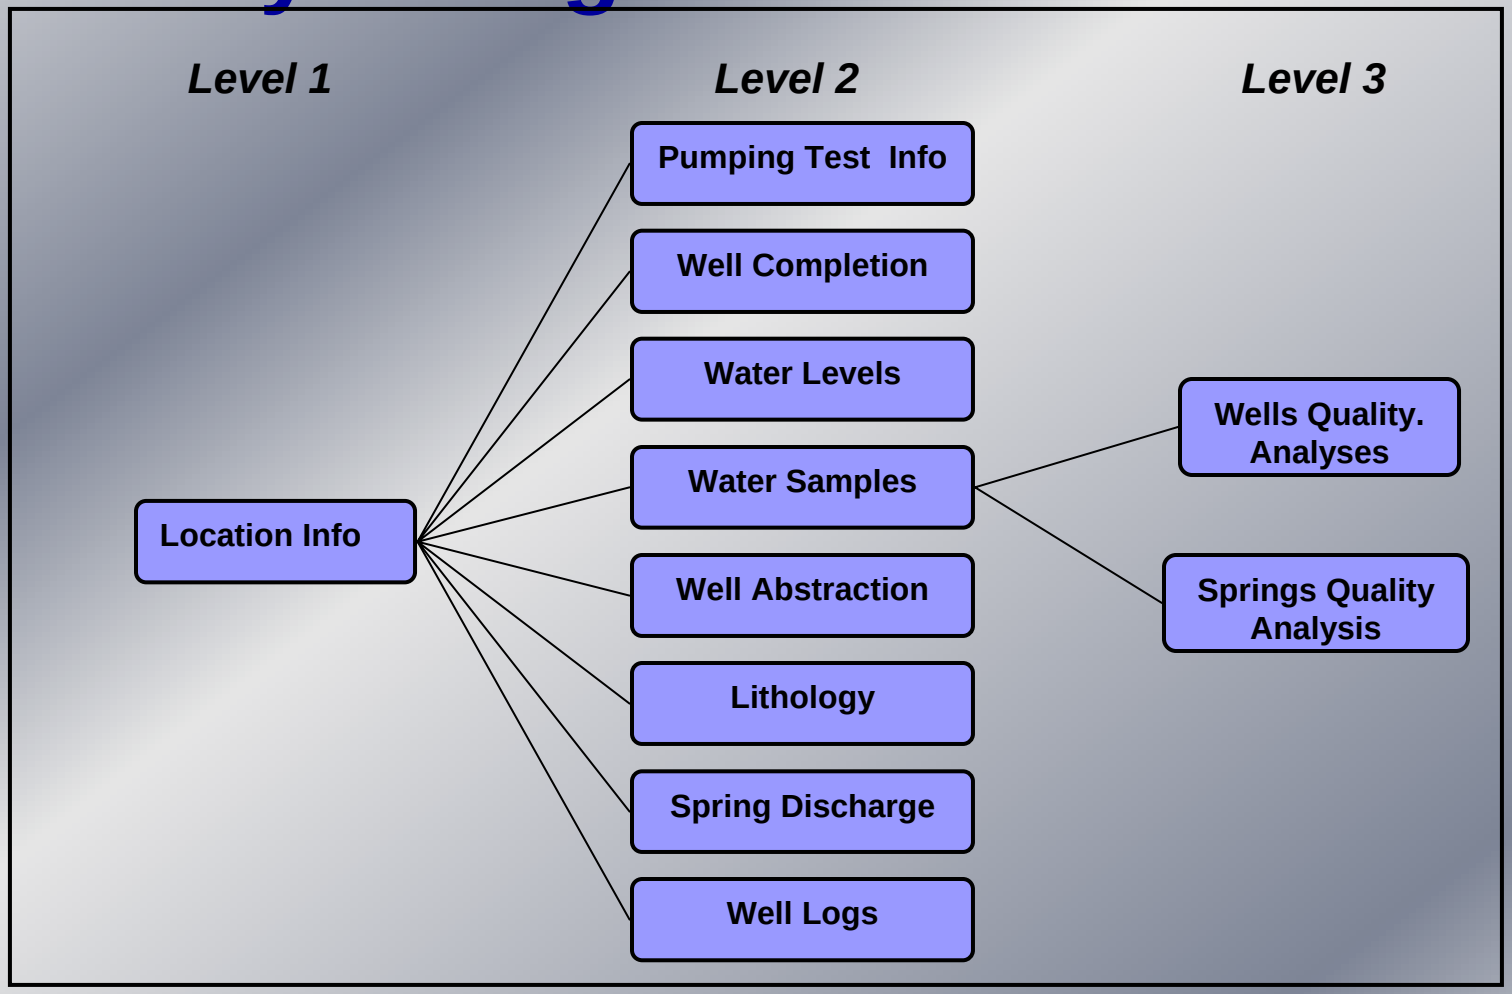
Conceptualization of the Hydrological Databases



PWA Rainfall Database

- Raingauges Master Data
- Daily Rainfall
- Rainfall Intensity
- Climatological Data (Evaporation, Temperature, Relative Humidity, Solar radiation…etc)

PWA Supply& consumption Database

- Purchased Water
- Local Produced Water
- Consumed Water
- Water Prices
- Water Losses
- Connected & Non Connected Communities

PWA Projects Database

- Projects Types (Water, Wastewater.. etc)
- Projects Status (implemented, ongoing..etc)
- Donors
- Costs
- Beneficiaries

Designed for GIS

- All of the data in the PWA databases is related to a location
- Having the location of each event as the ‘starting point’ for our data collection, make our databases GIS friendly

Geographic Information Systems

Why PWA needs GIS

To track and use information on water resources, facilities, operation, maintenance, management, planning, and to assist in policy and decision making.

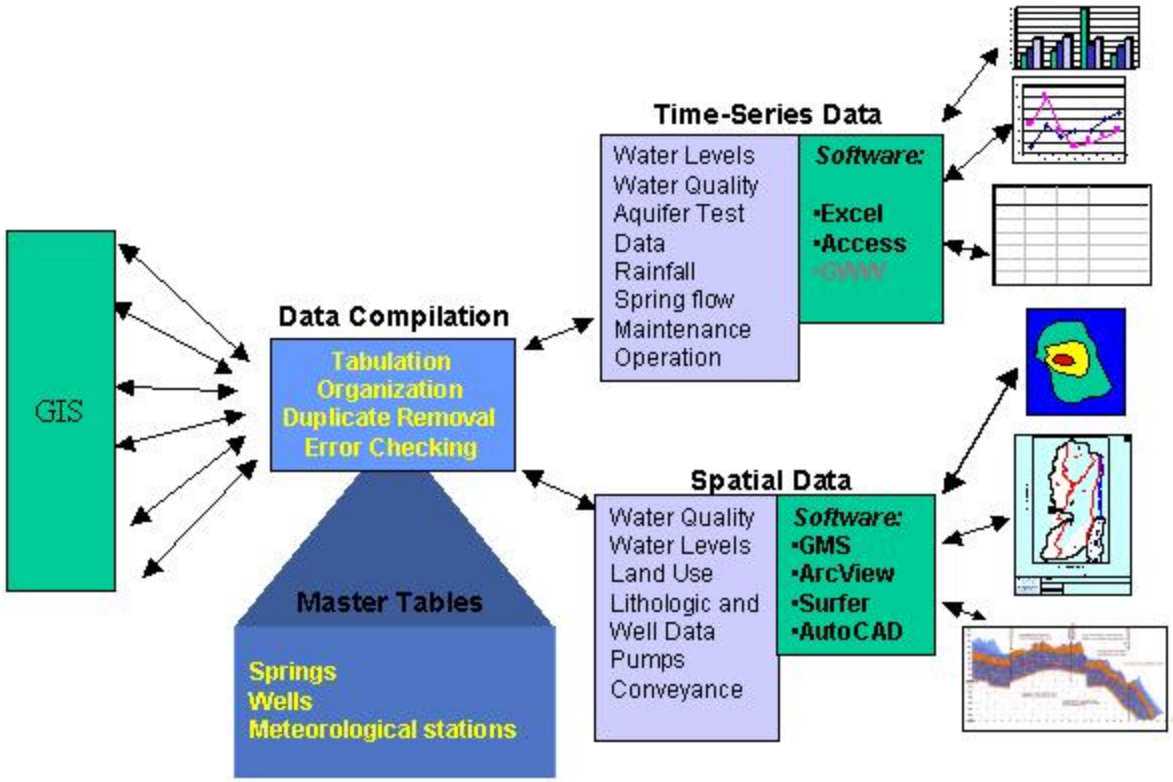
Examples:

- Water Resources Tasks (Models, Monitoring, Management plan, etc.)
- Engineering Tasks (Water and Wastewater Designed Facilities)
- Construction Tasks (Wells, Conveyance, Reservoirs, etc.)

GIS SOFTWARE in use at PWA

- ESRI products:
  - Initially started with ArcView 3.1
  - Currently use ArcView 3.3 and ArcGIS 9.1, (ArcMap, ArcCatalog & ArcToolbox)
- Extension:
  - Spatial Analyst - Adds grid functionality to GIS
  - 3D Analyst – Adds tin functionality and 3d visualization

Information Sources and Formats



Future Directions

Future Directions

- Data
  - Continue to QA/QC the data
  - Collect more relevant & accurate data
  - Disseminate more reports & publications
- Database
  - Convert to Oracle DBMS
  - More active and user friendly Database
  - Improve connectivity with GIS software

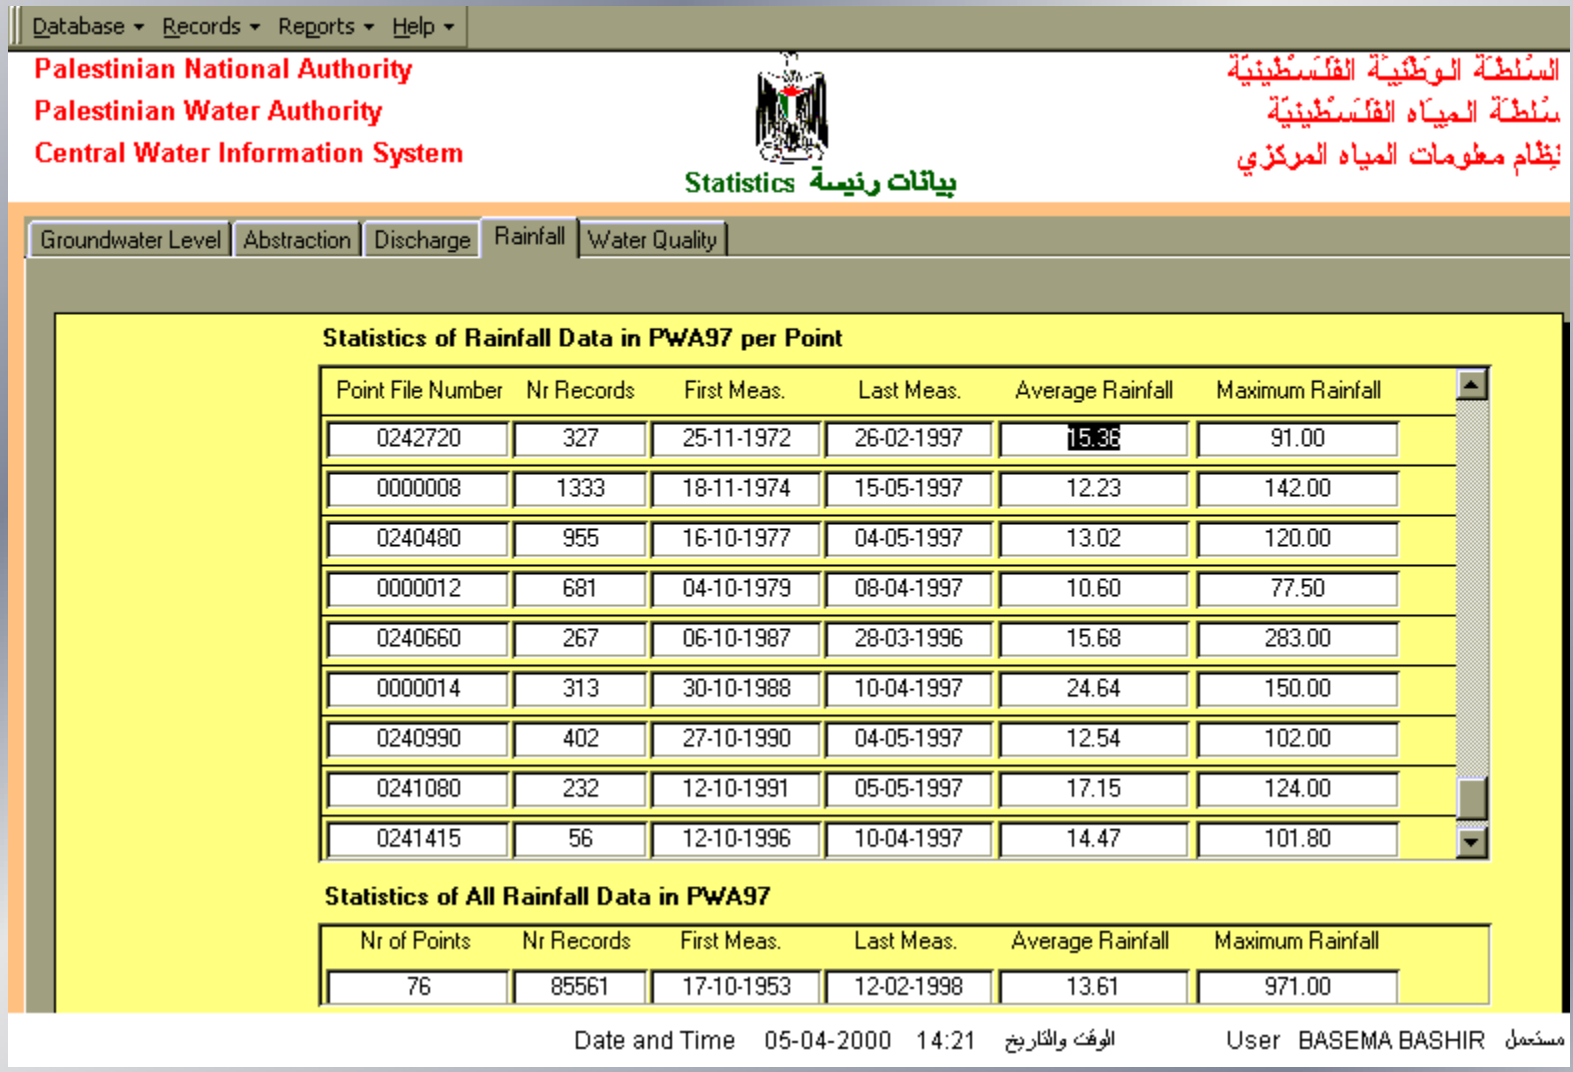
How Can PWA WIS serve EMWIS

Direct links to Databases

With defined access, Users can easily

- View Data either tables or graphs
- View maps
- Make Queries
- Print already Designed reports

Viewing data table



Viewing graphs
